

TEST PLAN — CampusKart (AAUA Student Marketplace)

Author: Kamsi Nwogu

Version: 1.0

Testing period: 13th September 2026 to 20th September 2026

Product under test: <https://campuskart.site>

1. PURPOSE

This test plan defines the scope, approach, environment, and exit criteria for a manual functional and UI test cycle on CampusKart ahead of release. The goal is to verify that the buyer, seller, and rider flows work as intended, that negative and edge-case inputs are handled safely, and that the product is usable across desktop, tablet, and mobile viewports and to hand the development team a reproducible defect log they can act on without follow-up questions.

2. SCOPE

In scope:

- Buyer sign up, login, logout, password reset, session behavior
- Seller sign up and seller dashboard (listing creation, listing management)
- Rider portal login and core rider flows
- Product listing page, product detail page, categories, search, and filters
- Cart, checkout, and order placement
- Wallet and payment behavior (up to, but not including, real money movement)
- Buyer-to-seller messaging
- Help, contact, and support forms
- Navigation, footer links, Terms, and Privacy pages
- Responsive layout at mobile ($\leq 500\text{px}$) and desktop ($> 1024\text{px}$)

Out of scope (and why):

- Load, stress, and performance testing — prohibited by the brief and outside a functional/UI cycle.
- Automated scanning and penetration testing — prohibited; would also risk harm to a live product.
- Real payment transactions — I test everything up to the payment step and document where I stop.
- Backend, database, and API testing — no access to the backend
- Cross-browser coverage beyond listed browsers — I do not have access to other browsers apart from the one listed

3. TEST OBJECTIVES

- Confirm that every documented user flow (buyer, seller, rider) completes end-to-end with valid inputs.
- Confirm that invalid, empty, boundary, and malicious-looking inputs are rejected gracefully with clear messages — never with a crash, blank screen, or silent failure.
- Confirm session behavior is correct: logout clears access; expired sessions redirect to login, back-button after logout does not expose protected pages.
- Confirm responsive layout holds at the three target widths with no overlap, cut-off content, or hidden controls.
- Confirm that every defect found is reproducible, documented with evidence, and severity/priority are justified independently.

4. TEST APPROACH

Type	What it covers
Functional	Each feature does what it claims for valid inputs
Negative	Empty fields, wrong password, wrong types, over-length strings
Boundary / edge repeated submissions	Min/max quantity, character limits, zero and negative values,
UI / usability	Labels, alignment, error visibility, button states, consistency
Compatibility mobile/tablet	Chrome, Firefox, and Edge on desktop; Chrome emulation for
Responsive	375px, 768px, 1280px viewports
Navigation	All links, footer, Terms, Privacy, back/forward behavior Session
Logout, session expiry, tab close/reopen, concurrent login	

5. ENVIRONMENT MATRIX

Item	Details
Primary device	Laptop — Windows 11
Secondary device	Redmi Note 13 (Android, physical device)
Desktop browsers	Google Chrome, Microsoft Edge, Mozilla Firefox
Mobile browser	Chrome for Android on the Redmi Note 13
Mobile viewport emulation at 375 × 667 as a narrow-mobile check	393 × 873 (Redmi Note 13 native), plus Chrome DevTools
Tablet coverage	Chrome DevTools emulation only — iPad Mini 768 × 1024.
No physical tablet available; noted as a limitation.	
Desktop viewport	1280 × 800 and one pass at 1920 × 1080
Network	Home Wi-Fi as the default; one pass on throttled "Slow 3G"
via DevTools for loading and session behaviour	
OS versions	Windows 11 [build]; Android [version] on the Redmi Note 13
Test accounts	"QA Test – Kamsi Nwogu (Buyer)", "QA Test – Kamsi Nwogu (Seller)", rider account if self-service signup exists

Test data
no real card or wallet funding
Test period
execution on Days 3–5

Obvious fake names, +234 test numbers, disposable email,
